

GRASSES

BROME GRASS

Brome grass is one of the most valuable of all grasses, having wide geographical area of adaptation from the Plains States of Kansas through Dakota, across the entire Corn Belt. It is a long lived perennial grass, with a very strong and deep root system, good palatability and feeding quality. It has a dense spreading root system, is well adapted to seedling down where erosion is a problem in terrace outlets, grass waterways, etc. Because it is a heavy user of nitrogen, it should be fertilized with 100 lbs. of nitrogen per acre to use with Brome. Combination legumes may range all the way from 4 to 6 pounds of Alfalfa up to 10 or 15 pounds of Brome. A little heavier seedling of Alfalfa is recommended where you want it for hay.

LINCOLN BROME GRASS

This is one of the best varieties of Southern Brome and in most ample supply. This variety is adapted anywhere where and under the Farm Program now of seedling down and taking acreages out of corn production, this variety of Brome is the best adapted to the soil conditions of the South. Large quantities available now at lowest prices in years. If you are going to need Brome for Summer or Fall seedling, we would recommend that you buy it today at these present low prices. With the fine quality, heavier weight, new crop Brome to offer at these extra low prices. Our Extra Fancy Grade is 85% or better germ. Fancy Grade is 90% or better germ, being about the only difference between the two grades. The Lincoln Brome is now being sown at 20% less than normal seedling rates. Item Nos. 137 and 138. Lincoln Brome Extra Fancy Quality.....\$21.00 cwt. \$10.65 50 lbs. Lincoln Brome Fancy Quality.....\$19.50 cwt. \$ 9.95 50 lbs.

ORCHARD GRASS

There has been a very great increase in the acreage seeded to Orchard Grass which is adapted to the bigger part of the Corn-Belt. It is being used further north than it has ever been before. It has a very strong root system, light soil and also moist soil, and it is known as a bunch grass and therefore preferred by many when they want to put legumes in with it as it is not as competitive. In combination with Ladino Clover it can't be beat. We suggest 1 lb. Ladino to 10 lbs. of Orchard per acre. This new government program is increasing the demand for all grasses and this Orchard Grass market will probably get quite a bit stronger along with the Fescue and other grasses. See page 17 of our catalog. Item 142. \$28.00 per 100 lbs.; \$14.20 for 50 lbs.

RED TOP

This grass will grow on very poor soils; also stands a lot of wet weather as well as drought. It is easy to get started and forms a turf quickly. Is good for both pasture and lawns. Postpaid, 1 lb., 90c; 3 lbs., \$2.10; 5 lbs., \$3.00. Item 127 on price list for quantities. The Red Top market, too, is very strong. 100 lbs., \$42.00; 50 lbs., \$21.20.

Remember when comparing prices to reduce Barry's by 20% to 25% from the prices of other grasses. Timothy costs no more per acre for seedling at \$6.45 bu. needed rate than other seed selling at \$6.45 bu.

TIMOTHY

Timothy is used in greater quantity and over a wider area than any of our other popular grasses today. This is because of its wide adaptation to about any soil condition and climate and also the fact that in combination it works fine with any other grasses or legumes. It is very easy to get started, can be seeded either in the spring or fall and under present practices probably more Timothy is used in late summer and fall seedlings than in the spring. With the present Farm Program in effect which takes a lot of acreage out of "cash crop" production, particularly corn, we would expect to see a big increase in demand for Timothy. We urge you if you plan to seed Timothy any time this summer or fall in your seeding program to buy it now at these present low levels. We can just about guarantee that it will save you money to buy any grasses now at the present prices, that you will be needing this summer or fall.

Two Grades Available

We have two grades of new crop Timothy which were bought from the best seedling sources and are of the highest quality. They are thoroughly processed and blended to finest quality. World Brand will always run 99.40% and better purity and around 90% germination. Our second grade called "Dealers Fancy" Item No. 78 runs around 99% to 99.25% purity and around 90% germination. Both grades are of the highest quality and are recommended by the Government to effect a small saving in seeding costs you can use the Dealers Fancy with assurance of getting finest results because it is Government Coated Brand processed which gives you the extra protection of the Government seal. Item 78 lowest seedling costs. Item 79 \$8.10 per bu. Item 78 \$7.65 per bu.

MARVELOUS MIXTURE

See page 13 of our general catalog for full description of this wonderful seedling. It contains approximately 3/4 clovers of different kinds such as Red, Alsike, Sweet Clover, Ladino and Alfalfa and the balance is Timothy. Containing over 25% red clover, this is a seedling that is tremendously high in production. Requires only around 10 lbs. per acre and at that rate will give you between 50 to 60 clover seeds per square foot with the Timothy in addition. We sell an enormous amount of this seedling. It is used for hay, pasture, erosion control and seedling down. Order Item 95. \$29.00 per 100 lbs.; \$14.70 for 50 lbs.

BASIC No. 1 PASTURE

This pasture mixture is also described on page 13 of our catalog and contains approximately 15% Tall Fescue, 15% Timothy, 20% Orchard Grass, 10% Brome, 25% Alfalfa and 5% Ladino. This is 70% grasses and 30% legumes. The combination of these grasses and legumes gives you high production, and splendid minimum and still give you high production, and splendid feeding value at low cost. Some customers like to add some other grasses to it and use this as the base and they incorporate Red Clover, Sweet Clover, Alsike, and Ladino. It is a splendid seedling. Order Item No. 107. \$30.00 per 100 lbs.; \$15.20 for 50 lbs.

FIVE WAY MIXTURE

50% legumes and the balance Timothy. This is similar to the Marvelous Mixture excepting that it contains no Sweet Clover, more Red Clover, with the balance Alfalfa, Alsike and Ladino. A splendid mixture for summer and fall seedling. It is a high yielding mixture and of quality in this seed that you purchase of the Five Way Mix. A high percentage of Clover add to the feeding value and also a high low seedling cost at 4-10 lbs. per acre and one that can't be beat at any price. For more information see page 13 of our general catalog. We also recommend that you buy this mixture now. The inoculation won't hurt the grass and it will definitely help the legumes. Item 100. \$31.00 per 100 lbs.; \$15.70 per 50 lbs.

REED CANARY GRASS

We have a special circular giving information on this grass for wet land and silt has given seasonally yield of 100 lbs. per acre. It is a heavy producer. For waterways or heavy wet conditions you will find this one of the very best of grasses. Item 129. \$15.00 per 100 lbs.; \$7.70 for 50 lbs.

RYE GRASSES

We refer you to page 17 of our general catalog for information on these grasses. They are fast growing grasses, while not as long lived as the others but especially noted for their fast development. Item 128. This should be considered as an annual. Order Item 128. Only \$13.00 per 100 lbs.; \$6.70 for 50 lbs. This is a rye grass that has PERENNIAL RYE GRASS. This is a rye grass that has PERENNIAL RYE GRASS. Item 129. \$15.00 per 100 lbs.; \$7.70 for 50 lbs.

TALL FESCUE GRASSES

The tall fescues have shown that they can stand more heat and drought than Timothy and Brome. They have a very long growing season and in some areas where the winters are not severe will stay green all winter. Prefers a moist rather heavy soil but will thrive on many types excepting exceedingly light soils. Moderately tolerant of alkali and will thrive on acid soils. These grasses are very productive.

Kentucky 31 Fescue
This is the most popular strain of the Tall Fescue in our area. Read what it did for one of our customers. "I have been using Kentucky 31 Fescue for years and it has made a lot of difference in my pasture. It grows fast, produces a lot of feed, stays green late in the season. Mix some Alfalfa or Red Clover or both with it and you have the best seedling to plant it can do for you. We offer 98/95 Ky. 31 Fescue Item 147 at \$19.50 per 100 lbs.

Alta Fescue
This is so near to Ky. 31 we can't tell them apart. We can offer you either one. Item No. 149—Same price as Ky. 31—\$19.50 per 100.

KENTUCKY BLUE GRASS

The most practical of all Lawn Grasses for the North-east, to the U. S., also makes fine pastures. Sow 2 lbs. per 100 sq. ft. Item 148. \$15.00 per 100 lbs.; \$7.70 for 50 lbs. Postpaid 1 lb., \$1.25; 5 lbs., \$5.00; 10 lbs., \$9.50. By freight 100 lbs., \$65.00; 50 lbs., \$32.70. Item No. 125.

SWEET CLOVER

LOT PREMIUM

This quality is strictly World Brand being a special selection of new crop Sweet Clover running somewhat heavier to Yellow Blossom than our regular World Brand Tall or White type. In mixed content it is similar to our Lot Special Mixed, but of course, is of higher purity and germination. Mixed Sweet Clover seems to have the advantage of giving you the earliness of the Yellow Varieties and a longer pasturing period and still well adapted for plowing under or green manure use for soil building purposes. Probably this lot is the outstanding value we have in Sweet Clover for this circular as it is a special offered only here, and is Gro-Coated Brand processed to assure you of maximum stands, and yields at a guaranteed saving in seeding costs per acre.

Item No. 84—Specially priced at \$9.90 per bu.

Hubam Annual White

This is offered only in our Extra Fancy very finest quality World Brand. It is a new crop seed, bright color, plump berry of highest purity and germination. Hubam is an annual Sweet Clover that makes its full growth the same year as sown. It can be used for pasture, hay or soil building purposes by plowing under in the fall. In Corn Belt farming Hubam helps to control root rot by making quicker rotations and thus keeping the soil in healthier condition. Seed bed preparation is the same as for Sweet Clover or Alfalfa, a firm well settled seed bed and preferably rolled after seeding. It should always be inoculated as any other legume or Sweet Clover.

Item No. 92 \$11.40 per bu.

Madrid Sweet Clover

Madrid has several advantages over ordinary White and Yellow Blossom. It gets off to a faster start and more vigorous growth putting extra humus and nitrogen into your soil. It is higher in yield than regular common and not as heavy or thick stemmed as White Blossom. Being more leafy makes it better for pasture and it is also a heavy seed producer. It can withstand heavier frost than other varieties permitting later fall pasturing. If you haven't tried this and are interested in Yellow Blossom Sweet Clover this is the variety that we recommend. For more details see catalog page 14.

Item No. 90 \$11.40 per bushel.

Special Mixed SWEET CLOVER

This is similar to Lot Premium in that it runs more Yellow than White the difference being in the quality as it is smaller berried and of lower germination. Being Gro-Coated Brand processed a seeding of 10 to 12 pounds to the acre will give excellent results as far as a heavy thick stand is concerned under proper farming practices and satisfactory moisture conditions. Sweet Clover at present price levels is most economical to use and a fine soil building crop for cash grain farmers.

See Item No. 87, \$9.00 per bu.

EVERGREEN SWEET CLOVER

Evergreen is a very fine Sweet Clover having been developed several years ago, but this is the first year supplies have been available for us to offer it. We only have a limited amount now and this is strictly new crop seed of 85% or better germ. It is as fine a quality as we could get without going to Certified Evergreen which commands still a much greater premium in price. It is a White Biennial Sweet Clover making a much larger growth the first year than ordinary White or Tall. It will also be a heavier forage producer the second year coming to full bloom two or three weeks later in the season, therefore, giving you a longer pasture season. We have had many fine reports of this variety where farmers were able to get a limited amount for trial all the way across the Corn Belt starting at Ohio in the East and coming across to Nebraska, and it is particularly well adapted and recommended in Illinois.

We will have to limit orders on this variety to 5 bushel per customer because of the limited supply which cannot be replaced once sold out. We are offering you the best quality obtainable on the present market without being certified but it is from Foundation or Certified seed so we know it is genuine Evergreen. It is also Gro-Coated Brand processed so that you can seed at the lowest possible cost and have the greatest assurance of getting the best possible stand. We would recommend from 8 to 10 pounds per acre and at around 30c a pound this still makes a fairly reasonable seed for such a fine new variety. Item No. 93.

Priced at \$17.85 per 60 lb. bu.

Be sure to order Inoculation for all Clover and Legume Seed.

LOT DO-MORE Our Lowest Priced Grade

This seed isn't too nice for looks. It's a splendid performer. This seed has smaller berries in it. That, of course, means that there are many more seeds per pound. Thus, while the germination per hundred seeds runs lower, the number of germs per pound is about the same as in the higher priced lots. It's principally White Blossom but will contain some Yellow. You can really cut your seeding costs with this Lot Do More and you will be getting a lot of value in Gro-Coated Sweet Clover seed when you order this.

It can be seeded at about the same rate as World Brand quality, 9 to 6 acres per bushel.

Item No. 80 \$7.80 per bushel.

All Seeds on This Page are Gro-Coated Processed.

BIRDSFOOT TREFOIL

This is a broadleaf trefoil and has many wonderful properties. We can't tell you all about it here. There is more information on it on page 12 of our catalog and we have a circular that will give you additional information.

It is a long lived legume. Never been known to cause any bloat when pastured and many like it especially for that reason. It is adapted to a very wide range of soils. It is drought resistant, will grow also on poorly drained soils and in shallow droughty soil. Its ability to grow on such a wide range of soil has caused some to name it poor land Alfalfa. However, on good soils that have lime it will do its very best. It will, however, stand a lot more acid in the soil than most other legumes.

Since it is slow in establishing itself it is best to consider it in long rotations rather than in short rotations. It does not like too much competition when it is small because the plants are fine, but once established it holds its own better than most other legumes against competition from other grasses. It has a feeding value similar to Alfalfa. Sow around 5 or 6 lbs. to the acre.

Item No. 65—Imported or European \$57.00 per bushel.

Certified Empire Trefoil

It has now been clearly demonstrated that the Empire Strain will maintain itself for a much longer period than European or Imported. Although not as tall growing it definitely lasts longer in pasture combinations. It becomes thicker in the stands and this increases pasture production and profit, and has proven itself more winter hardy. It can be seeded most any time in the spring or early summer. Be sure to use double or triple amounts of recommended rates of inoculation when seeding Trefoil.

Item No. 66 \$11.00 per bu.; \$55.70 for 1/2-bushel. Postpaid 1 lb., \$2.50; 3 lbs., \$6.50; 5 lbs., \$10.25.

DWARF ESSEX RAPE

We recommend this crop to all hog growers who have land of good fertility where you may reasonably expect favorable moisture conditions. It will really cut down the cost of producing pork because it furnishes so much growth which is very high in protein. Grows fast, you can pasture it in 6 to 8 weeks after seeding. The cost is low, only 5 to 6 pounds to the acre will afford pasture until frost in the fall. See page 14 of our catalog for other information.

Can be sown from about small grain seeding time until mid summer.

Order Item 233. \$16.00 per cwt.; 50 lbs. \$8.20.

HAIRY OR WINTER VETCH

Through the bigger part of our area this Vetch is sown in the fall. Oftentimes with a crop like winter rye and then plowed under the next spring or utilized then for hay or pasture. When sown in the spring it acts as a biennial. While the growth during the summer may not be too large it will start up in the fall. It likes cool growing weather for best results. It is one of the very best crops that you can use on sandy soils, and is also quite tolerant to acid. Sow around 20 lbs. to the acre. See also page 14 for other information. Be sure to order inoculation when you buy winter vetch.

See Item No. 68. \$12.60 per bushel, 60 lbs.

LESPEDEZA REGULAR KOREAN

We have a circular that will give you more information about Lespedeza that we will be glad to send to you and there is also more information about this wonderful crop on page 14 of our catalog. This crop will grow on very thin land. It likes wet weather and for that reason it is a splendid crop to use in connection with pasture because it grows well when other crops may become dormant. It doesn't grow tall. It is leafy and makes a lot of high quality pasture. Very easy to get started. We think that the Regular Korean should not grow much further north than southern Iowa. Be sure to inoculate any Lespedeza seed you sow.

Price Regular Korean Hulled and Scarified, Item 72, \$10.20 per bu. Hulled seed goes about 1/3 farther.

EARLY IOWA NO. 6 LESPEDEZA

A newer early strain similar to 19604 described below. Can be grown as far north as Central Iowa. Growing habits similar to 19604 but it has considerably more resistance to wilt. That is very important in some sections. Lespedeza is a very valuable addition to pasture anywhere it is adapted. The feeding value is high. It will grow on poor soils and stands lots of heat. This Legume can add a lot to your pasture income. Makes profitable seed crops.

Item No. 74, Hulled and Scarified \$13.20 per bu. 60 lbs.

EARLY KOREAN 19604

This is a variety of Lespedeza that we consider adapted to central Iowa and throughout the United States where climatic conditions are similar. Of course, it can grow further south also. It is better in this northern area than the Regular Korean because it matures earlier. The Korean Lespedeza is an annual and will come up from year to year only if it reseeds itself. If the season is too short it will not make seed. This variety has made seed 100 miles further north than the ordinary Korean. Growth up to 2 feet high has been reported although you will not always get that tall a growth. It will depend somewhat upon soil fertility. It will grow on very poor land but the heavier growths are obtained on the richer soils. However, even a very short growth can supply a surprising amount of feed because it is so leafy and those leaves are very high in feeding value. We recommend very much that you use Lespedeza especially in pasture combinations because of its ability to produce during the hot dry weather. The seed is much lower in price this year than it has been.

Item No. 75 Hulled and Scarified, Only \$11.40, 60 lbs.

SERICEA LESPEDEZA

This is a perennial kind that comes up from the root system instead of from seed that has shattered at the Korean does. It is a coarser growing plant. However, if it is left to stand for a number of years it continues to send up more stems and thus has somewhat finer growth habit. It grows 2 to 4 feet high. We do not recommend that this Lespedeza be sown as early. It seems as though it does better if it is sown somewhat later in the season. The seed is considerably smaller and in the Gro-Coated seed 10 pounds per acre is a very liberal seeding. This is not recommended for areas to the north of Clarinda. Be sure to read more about this in our circular on Lespedeza which will be sent free upon request.

Order Item No. 76 Hulled. \$12.60 per bushel, 1/2 bushel \$6.50.

HARDY RED CLOVER

KENLAND Medium Red

This variety which is resistant to Southern Anthracnose is producing better results today than when first introduced several years ago. This disease is becoming more common, so for the southern half of the Corn Belt area, from a latitude of Southern Iowa across Central Illinois, Central Indiana and Ohio and areas south we recommend this as being the superior clover to use in your seeding practices and rotation program. It will give you extra yields and our Western new crop seed is of quality that will please most critical buyers either in the Certified or non-Certified grade as offered on the price list pages 4 and 5. Both are Gro-Coated to give you maximum results at low seeding cost. Items 37 and 38.

Special Planet Medium Red

This is an extra special value for this particular circular offering. It guarantees you a serviceable quality of Red Clover at the lowest possible cost. It is Gro-Coated Brand processed to give you the greatest assurance of better stands at a reduced seeding rate per acre which will save you to 20% in seed usage and costs per acre. It is a fairly plump berry and is a blend of origins adapted for the entire Corn Belt area usage and will average around 98% pure and around 75% germination. We recommend 6 to 7 pounds to the acre and on that basis we are sure you will find it will save you money and give you satisfaction. Item 31a.

A real value at \$19.95 per 60-lb. bu.

Choice - Fancy Medium Red

This is a regular grade of new crop seed. For those seeding down acreages that don't mind a trace of other crop seed with their Medium Red Clover it is an extra fine value as it is of good germination and is as nearly free of any weed seed as our regular World Brand quality. This lot will run around 98% to 99% crop pure averaging about 3% or more of other crop seed like Alfalfa, Alsike and Sweet Clover. This is Gro-Coated Brand processed so 6 lbs. will make an ample seeding under any conditions. See Item 32. \$22.80 per bu.

Medium Red Clover LOT MAY "BLEND"

This lot of Red Clover is a blend of finest qualities and varieties available on the present market. It averages 99.50% or better purity and 94% or better germination. It contains about 50% of the New Dollard, Kenland and Penscott varieties and the balance especially selected lots of highest quality Western Groves Red Clover which will probably be largely Idaho origin. The origin on the New Improved varieties will usually be California, and this is a beautiful appearing lot of seed, a blend of varieties that we feel will make it adapted for most of the Corn Belt area from a hardiness or yield standpoint. The blend of varieties will also be designed to give you maximum quality in your forage production. It is Gro-Coated Brand processed and can be seeded at 5 to 6 pounds per acre. At 6 pounds it will cost you about \$2.60 per acre which in a Corn Belt rotation is a fine average for Red Clover. Item No. 40. Outstanding Value at \$25.95 per bu.

DOLLARD CLOVER Certified Medium Red

This is an outstanding new variety of Medium Red Clover developed in Canada and this is the first year supplies have been generally available in commercial quantities. It is especially adapted to more northern areas where lack of winter hardiness is a factor in loss of stands on Red Clover. It is resistant to Northern Anthracnose disease and where it is prevalent will greatly outyield any other Red Clover strains. Where Northern Anthracnose is not common it still is a superior producer both in quality of forage and tonnage. This is Gro-Coated Brand processed so even at the higher prices where you need 6 or 8 pounds per acre it will not cost you much more to try this new outstanding variety than if you buy Common Red Clover which is not Gro-Coated Brand processed, due to the saving in seeding rate per acre.

Order Item 39. This is \$31.80 per bu.

See Pages 4 and 5 for Complete Price List.

IDAHO or Western PRIZE \$23.85 bu.

Western seed is always extra bright and plump. You can't buy finer looking seed and it gives splendid results in the corn belt. Many of our customers will sow nothing else. We got this seed at a sharp discount because it contained 1% to 1 1/4% of crop seed. It is 98% pure Clover and has a germination of 90%. That's No. 1 grade quality. This is a high quality at a really bargain price. There's only a trace of crop seed. It will pass as the very best. Lot Prize. Item No. 36.

World Brand Grade

You can also get the regular World Brand grade as described on page 10 of our catalog. That's Item No. 35. Price \$27.00 per bu. or only \$2.70 per acre.

Don't Forget, For Quantity Orders, Individual or Group, You Can Get 5% Discount From These Special Low Prices.

BIG GROWING MAMMOTH RED CLOVER

A larger growing plant than the Medium Red, somewhat coarser. Makes a larger crop in the first cutting, but the second cutting is generally not as tall as the Medium Red, but affords a lot of pasture. It matures a little later than the Medium Red, generally lives longer, it's splendid to use in pasture combinations or for soil building. World Brand represents the very finest quality.

WORLD BRAND

This is new crop seed of hardy Central States origin that is adapted for use anywhere in the Corn Belt areas that Mammoth is used. It is Gro-Coated Brand processed to assure you of better standard, bigger yields and more profits from your seedings. At our recommended rate of 5 pounds to the acre it makes a very economical seeding.

Item No. 41. \$26.40 per 60-lb. bu.

LOT SOIL-BUILDER

65% Mammoth, 35% Sweet

We like this remarkably well for soil improvement. It has enough Sweet Clover in it to make a deep penetrating root system and then the Mammoth to give the more fibrous roots in the top soil. It gives you a wonderful root growth and an enormous tonnage in top growth. The Mammoth grows up in the Sweet Clover, it all grows erect. Will produce a tremendous amount of feed. If you plow under a crop it does wonders for your soil and it's way down the line in price. This is a dandy to mix with grasses too for pasture.

This lot is everything that its name implies. A real soil building crop. It adds tons of humus to your land and lots of nitrogen. We are able to make an especially low price on this because we purchased some lots that are grown mixed, and thus cost us a small percentage discount. It's of course Gro-Coated like all our seedings, and like all legumes we strongly advise that you inoculate any clover seed that you sow. A bushel of this Lot SoilBuilder will sow 9 acres.

Order Item No. 43. Only \$18.00 per bushel.

LOT BIG-BOY

High Purity Lot Including 4% of Crop Seed.

Here is another example of superior value that you can obtain from Berrys. We purchased this lot of seed because it will run 99% pure Clovers. It contains about 4% of other clovers such as Alfalfa and Sweet Clover. It will not average over 4% of such clovers. That small percentage can hardly have any technical effect on the quality of the crop that you would produce. It is because of this crop percentage however, that we can buy this seed at special advantage and offer it to you as an extra value. The seed is otherwise very similar in general appearance to our Fancy Grade of Medium Red described above. Not quite as bright as World Brand. Capable of producing fine stands at regular seeding rates. Our germination tests show 80-85% live seed. You will get your money's worth and then some in this Lot Big Boy. Item No. 42. \$23.40 per bushel.

ALSIKE CLOVER

Alsike Clover due to the large new crop production is very reasonably priced. It makes a most economical seeding in combination with other grasses or legumes. It can be seeded, of course, with grasses or straight where other legumes such as Red Clover would not be adapted under wet soil conditions, low places or where the soil may be too acid. Alsike is long lived where moisture conditions are favorable and although it prefers a loam or heavy soil it does exceptionally well on most soils in combination with Timothy, Tall Fescue, or Orchard Grass. It can be easily top seeded on old pastures or meadows in the winter where you have snow covering as the small seeds work into the ground readily. 1 to 2 pounds in mixtures is adequate as 4 to 5 pounds per acre will make a seeding of Alsike Clover itself.

Two Grades Available

World Brand is the pick or cream of the new crop production. It averages about 99% pure and 90% germination. It is as free of any weed seeds as modern processing methods can make it. It has plump berries and bright color. Both World Brand and Universal Brand as well as all of our seeds are Gro-Coated Brand Processed to give you the best results at lowest possible costs.

The Universal Brand is a little lower purity and germination than World Brand. It may contain a trace of other crop seed such as White Dutch Clover, which is not objectionable. It will give you just as satisfactory results but if you demand the best always choose World Brand quality because at present price levels your seeding costs are going to be very low anyhow.

Item 54 World Brand \$21.00 per bu.
Item 52 Universal \$18.00 per bushel.

LADINO

A Giant White Dutch-Type Clover WORLD BRAND QUALITY SEED

This Clover can be used for pasture. You can put it in a silo and it has been widely used as a hay crop. It is widely adapted, easy to start, perennial clover, very palatable. It starts growing early in the spring. Will stand wetter land than Alfalfa or Red Clover. Produces abundantly on upland soil to good fertility. It has very fleshy, creeping stems that root at the joint. It covers the ground very thoroughly. The blossoms sometimes are as large as Red Clover but of course look more like the White Dutch Blossom. You can use it as a straight Ladino pasture for poultry but for pasture for sheep and cattle you should use considerable grass with it in order to reduce the danger of bloat.

The reports used as a poultry range indicates yields as high as 30 to 40 tons of green feed per acre. Analyses as high as 30% protein on a dry basis. An 8 acre range carried from 2,500 to 3,000 head of poultry from April until October. Illinois reported three cows pastured per acre throughout the grazing season. This crop is very widely adapted. It is grown from the Atlantic to the Pacific and south into Tennessee for pasture, hay and silage. It really is a wonderful crop when properly used. Ask us for our free circular on Ladino Clover. Use it to seed old pasture without covering. It sown alone 2 pounds per acre is enough. A half to one pound and even a quarter of a pound to the acre added to other seedings is good.

The seed that we have for you is the genuine State Certified Ladino. There is nothing better. In small lots of course, it does not come with a state seal but it is all genuine certified stock. Item No. 63.

\$33.00 per bushel. Postpaid: 1 lb. \$2.25; 5 lbs., \$4.75; 10 lbs., \$9.25

Ask for Our Circular on Ladino

ALFALFA SEEDS

Berry's 5-YEAR Blend It's ALL GRO-COATED

99.25 to 99.50% Pure — 90 to 94% Germination

In preparing the different blends that are listed in this column we are putting together the kinds and varieties that we believe will produce heavier yields than any of them sown separately. We get a little difference in height of the plant which is designed to give a higher percentage of leaves and therefore, greater feeding value. There are a number of different blends on the market not all of superior character. We believe in comparing our Alfalfa Blends you will find them superior and more profitable to grow.

We call this a 5-Year Blend and it is recommended to those who like to maintain a stand of

Alfalfa for several years. Many factors may have a bearing upon the length of the stand. This 5-Year Blend contains approximately 20% of the hardy heavily productive and wilt-resistant Vernal, 50% Ranger and 30% other hardy Northern Alfalfas. These are all noted for splendid winter hardiness, excellent yielding ability. It comes in as fine a quality as you can buy, being equal to the Blue Tag Certified seed in purity and germination test. This 5-Year Blend is a seedling that should last for a number of years and to be superior to straight variety seedlings.

Item No. 5

\$26.40 Bu.
Item No. 5

All the Alfalfa that we sell is Gro-Coated Brand processed for lowest possible seeding cost per acre. This is described further on page 8 of the circular but for full details see pages 2 and 3 of our catalog. Berry's Gro-Coat has long been well known although a private formula and now it is improved by having CMC95 added. This gives the seed greater protection

AND IT COSTS

The very finest of seed that you can buy may rot in the ground if you get unfavorable weather after seeding, or a goodly portion of it may rot so that it will result in a poor stand. When it has this protection which kills the fungi that cause the rotting then it follows that more of the seeds which you sow will make strong growing, healthy plants. For not only is the seed protected but it gives a measure of protection against the seedlings after they have just sprouted. Since you can expect more plants per pound of seeds sown, you do not have to sow as many pounds to the acre. This is the reason why the acre cost is always less if you follow our recommendation.

It may be that you still want to sow the regular rate and you do not want to follow our recom-

Berry's 4-YEAR Blend

99.25 to 99.50% Pure — 90 to 94% Germination

This is very similar to our 5-Year Blend excepting that it contains somewhat less Vernal and has the heavy producing wilt-resistant Buffalo added. This is approximately 60% Ranger, 30% Buffalo and 10% Vernal. This 4-Year Blend has even a greater potential yielding ability because the Buffalo is a very heavy yielding variety. Perhaps Buffalo is not quite as winter hardy as the Ranger and Vernal, we classify this under the term of the 4-Year Blend. It is very well adapted to areas having climatic conditions similar to those going up to Central Iowa. Truly a good alfalfa.

The Buffalo comes from a Kansas strain and is very popular among Dairy farmers even in northern areas. When you make this seeding at the rate of 10 lbs. to the acre you are planting in the neighborhood of 60 seeds per square foot. Even if the Buffalo should winter kill you would still have in the neighborhood of 40 seeds per square foot of the Vernal and Ranger to produce. You do not have to sow our Berry Gro-Coated Alfalfa at more than 10 lbs. to the acre and some sow less. That is what makes Berry Gro-Coated Alfalfa seed always economical to sow and so popular a seedling with our trade.

Item No. 6

\$25.80 Bu.
Item No. 6

Berry's 3-YEAR Blend

99.25 to 99.50% Pure — 90 to 94% Germination

The Alfalfas that we use in this blend do not contain as much of the wilt-resistant lines because it is recommended to those who probably do not want the stand to be maintained over three years. Bacterial wilt very seldom is bothersome until after the third year. Therefore, in making up this Alfalfa we use the old reliable midwestern or northwestern Alfalfa named Dakota 12. There really is no Dakota 12 variety but that term has been used to designate the northern Alfalfa. We use approximately 60% of that kind of seed in our 3-Year Blend and then we also add about 25% Ranger and 15% Buffalo. This is all top quality seed and, of course, has Gro-Coat protection to the very last.

You can use this blend in a 2-year rotation like Red Clover. Then of course, it will normally stand over a three year period and generally considerably longer. The terms that we use like the 3-year, 4-year blend does not mean that we would guarantee it to last just that many years. The farmer that practice rotation should like this 3-year blend very well.

\$24.60 Bu.
Item No. 2

2-YEAR BLEND

This seed is what may be commonly termed the non-hardy. It is like Texas, New Mexico, Arizona and California. We designate this as 2-year blend because it frequently will live over one winter. This, of course, cannot be guaranteed. It is an Alfalfa that many select for plowing under the same year it is sown to give them maximum early production. For maximum results the first year sow it without a nurse crop. Light nurse crops can be used but the heavier the nurse crop is the more the early rapid growth will be retarded. When used without a nurse crop it is sometimes desirable to sow this at a heavier rate than you would with the other varieties of alfalfa and the plants develop in size and in productiveness. We recommend 15 lbs. to the acre of this 2-year blend if you want the maximum results in the first year.

All these blends are top quality in every respect and all of them have the Gro-Coat protection which of course, goes on all Alfalfa that we sell. We wouldn't consider anything else. Any farmer who has had experience with the Gro-Coat knows that it can be depended upon for superior performance, especially in years where unfavorable weather follows a seeding.

\$19.80 Bu.
Item No. 1

LOT HONEST JOHN

This is an Alfalfa that is low cost and has been very popular. We buy this type of seed at a materially lower price and sell it at much lower figures because the berries are somewhat off-colored and they are smaller and the germination per hundred seeds runs a little lower, but since the berries are smaller there are more seeds per pound, and our customers get very satisfactory results from this seedling. A great many customers who have used it for a great many years will use nothing else. It is very similar in composition to the three-year blend that is described above and you will find it a splendid value at this extremely low price. Item No. 11.

\$17.40 Bu.
Item No. 11

LOT BED ROCK

This is similar in quality to the Honest John described above. It is so designated to give longer life and somewhat extra winter hardiness. Like the Honest John it doesn't have the appearance but it does give good performance. Lot "Bedrock" is a blend of hardy northern origins and varieties of slightly lower quality than our World Brand. It is Gro-Coated, and can be returned if you are not satisfied with it when you get it.

\$18.60 Bu.
Item No. 17

See Item 17

Wilt-Resistant BUFFALO

Certified Buffalo

The Buffalo Alfalfa is more fully described on page 7 of our general catalog. It is developed from a selection of strain of Kansas Common Alfalfa. It is far superior to Kansas Common variety in that it is resistant to bacterial wilt. Where you want the stand to be maintained for several years bacterial wilt is apt to come in and that can drastically reduce your yields so that you will have to plow it up. With the Buffalo you escape that problem.

One reason why a great many farmers like Buffalo over all other Alfalfas is because of its heavy growth and its quick recovery after cutting. Normally Buffalo is recommended in areas like Central Iowa and on south, but still farmers in the north-eastern states like the Buffalo because of its yields. That is why they buy a lot of Kansas Common in those states and now with the Buffalo you really get an improvement in the Kansas and thus a splendid variety to be growing. It depends somewhat upon your particular farming program, your soil type, etc. Buffalo is a real heavy yielding Alfalfa. In Certified Buffalo you get the very finest of quality in every respect. It's Buffalo Certified.

VERNAL ALFALFA

an ever before. When all conditions are favorable for seeding, the protection is not so essential as when you get cold weather after seeding. Nobody can fore-see the weather, but you can protect against it by using only the exclusive genuine Trade-marked Gro-Coated Brand processed seed. It will pay you big profits.

55 PER ACRE

ations for lighter seeding. Then it is possible the Gro-Coated Brand seed could cost you only more per acre because it costs a little more per pound, as it is expensive to put this treatment on seed. We will guarantee that if you sow at the same rate that you will get noticeably heavier yields in your field than you will from any other seed that you can buy including any other treated seed. If it fails to give you noticeably better results we will refund to you any extra cost per acre that may have been in our seed. No one can make you a crop proportion than that. It certainly is to your credit to use Gro-Coated Brand seed because it is the best you get, the standard, and therefore larger yields and greater profits.

100%, Big Yields Lot Rick Buffalo

This has the same heavy-yielding potential that you can get from the Certified Seed. This Buffalo will outyield practically any other variety in the area to which it is especially adapted. This Lot Rick is bright colored, big berries and runs 99.50% pure. However, it is not as high in germination and will run in the neighborhood of 70%. For this reason we suggest sowing a bushel to 5 acres rather than 1 bushel to 6 acres. This still gives you a seeding cost of only around \$3.50 per acre which for Buffalo Alfalfa is a very reasonable cost. Since the seed has the Gro-Coated protection you can depend upon it to give you as good stands as higher germinating seed without this protection. Remember all prices are fully freight paid in most states. You can get up to 50 lbs. or more on discount for pooling your order with your neighbors or friends.

Ranger is a very hardy Alfalfa and also has excellent resistance to bacterial wilt. It has a refined growth habit, and excellent feeding value. Certified seed comes from fields that were grown from foundation stock that has been inspected by state authorities and seed is checked from harvest time to bagging by state authorities. It does not matter in what state this Certified seed may have been produced, as that from California will be equally as hardy as that coming from more northern states. Our Certified Blue Tag Ranger is selected to bring you the highest possible purities around 99.90%, germinations 95% and better and nearly 100% free of any weed seed. It is especially processed for lowest possible hard seed content and Gro-Coated Brand processed to give you maximum results at lowest possible seeding costs per acre.

Item No. 25 or No. 26

LOT CHUCK—LOW COST RANGER

99% Pure—85% Germ. \$6.75 per bushel below Certified Seed.

This is a very nice lot of seed that we obtained from a party who wanted to make a quick sale. He offered it considerably under the market. This was, of course, after our catalog was printed. We snapped it up so that we could give our customers another one of those extra measures of value. It has a very nice color and good sized berry. It is only a few percent below the top quality in germination. It is a seedling that has strong growing power. You do not have to sow it over 10 lbs. to the acre, so your seeding cost is less than \$3.00 an acre and

that is a very low seeding cost for Alfalfa. It is more than 11c a pound under the cost of the Certified Ranger so you can see that the saving is a big one. The supply is limited so we urge you to order this special Lot Chuck at once. Remember our prices are freight prepaid when any order amounts to 300 lbs. or more and goes to the states mentioned in the top of the price list. At this low price start in your neighborhood with friends and relatives to get a group order of \$1000.00 or more for the maximum quantity discount of 5%. On that basis we guarantee this value is unequalled anywhere.

Item No. 28a

VERNAL ALFALFA

Certified Vernal

Vernal Alfalfa has made some very splendid performance records over a very wide area. Wisconsin rates it above all other varieties stating that they find it has greater winter hardiness there and also higher resistance against bacterial wilt. The tests in Iowa and other surrounding fields have been very satisfactory. It is both what darker green color than the average Alfalfa and it certainly is a most splendid variety. We have four lots of Vernal available. Supplies of any of them are limited and are, therefore, offered subject to being unsold. In the Certified Vernal you get the very top quality seed. The variety purity is vouchered for by the Certifying agencies and in addition we give this seed Gro-Coated protection. This is done at a lot of extra expense because we have to bring a seed inoperative to clear to Florida to have the bags reopened and then the seed goes through our treaters and is resacked again. The germination is only slightly below normal and with Gro-Coated protection you get better than normal performance when compared with higher germinating seed without the Gro-Coated. The Vernal Alfalfa is in extremely heavy demand. We know that we cannot replace this very special value after it is sold out. We therefore offer it to you subject to being unsold. If you will mail your order promptly upon receipt of this circular we should be able to take good care of your order, but don't wait too long or it will be gone.

Item No. 29

World Brand Vernal

99.25% Pure—90% Germination

This quality seed is just as nice looking as the Certified and is about the same germination and freedom from weed seed. It simply means that all farmers do not grow seed for certification in marketing their seed. We make contacts with reliable people to know that the seed being purchased is as represented. There is always some saving in price by purchasing seed that has been obtained directly. In this manner you get the benefit of the saving in price that we make. You can get further information on Vernal Alfalfa by reading page 7 on the general catalog which we sent to you earlier. If you have mailed your copy drop us a line and we will mail you a copy of our catalog. You get another one at once. All of our lots of Vernal are relatively small so are being offered subject to early acceptance and order.

Item No. 23

Lot Zeke Vernal

99% Pure and 83% Germ.

Priced \$6.15 per bushel below Certified

This means a saving of over 10c per pound. This lot of seed has good color and nice berries and in appearance and performance it is truly a sensational value in this highly recommended variety. The germination is only slightly below normal and with Gro-Coated protection you get better than normal performance when compared with higher germinating seed without the Gro-Coated. The Vernal Alfalfa is in extremely heavy demand. We know that we cannot replace this very special value after it is sold out. We therefore offer it to you subject to being unsold. If you will mail your order promptly upon receipt of this circular we should be able to take good care of your order, but don't wait too long or it will be gone.

LOT VALUE ALFALFA

99.25% Pure—90% or Better Germination

A special extra value offer for this big sale circular, also the Grimm and Cossack

This is common alfalfa seed of hardy origin such as Nebraska, Washington and Utah, sold by some as the Dakota No. 12 variety. There really is no such variety, but that name has been used to designate hardy common seed of this character, and it is a splendid seed. Not quite as fine stemmed as the Grimm but generally makes a heavier production and many of our customers think it is about the very finest alfalfa of all. This is a beautiful lot of seed, strictly high quality in every respect and for Alfalfa with excellent growing records and performance you will be thoroughly pleased with this splendid value. Item No. 18.

\$22.50 Bu.
Item No. 18

GRIMM ALFALFA

This is the type of Alfalfa that has long been a favorite with customers especially those wanting a variety of excellent winter hardiness. The Vernal has replaced the Grimm in a good many areas because winter bacterial wilt is a problem they have superiority. However, when that is not present the Grimm still remains a very splendid variety of Alfalfa. We have only limited supplies of this Grimm available, but we have obtained some from reliable sources that we can offer at attractive prices. It is World Brand quality seed strictly first class grade in every respect, and seed that we are sure will please discriminating buyers. It will be 99.25% pure and 90% or better germination. Splendid color. Gro-Coated Brand Processed.

\$22.95 Bu.
Item No. 19

COSSACK ALFALFA

The Cossack like the Grimm is a variety that has proven extra winter hardy. It is considered by some to be superior even to the Grimm in that respect. It is possibly somewhat finer stemmed and may be a little slower in recovery after cutting, yet it has other characteristics that make it a favorite with a lot of farmers who have grown it in years past. This too is World Brand quality seed strictly first class grade in every respect. We have only limited supplies that are obtained to take care of the requirements of customers who demand only the Cossack variety and we are glad that we are able to supply you with it. Satisfactory quality as well as safe arrival is fully guaranteed.

\$24.60 Bu.
Item No. 20

OATS

The Test weight of your seed has a tremendous effect on yield. Seed oat prices at our retail stores are much lower due to the saving in freight.

CERTIFIED RANSOM

Ransom is an early maturing yellow variety having fairly strong straw and a grain quality of good test weight. Its outstanding characteristic is its stem rust resistance including races 7, 7A and 8. It is also moderately resistant to Crown Leaf Rust and Smut, moderately susceptible to blight. In a bad rust year its early maturity and resistance to stem rust will make it most outstanding for both yield and quality. Being a new variety seed supplies should bring a good demand at premium prices another year, so we can recommend this to you very highly. Item No. 163.

CERTIFIED GARRY OATS

This is one of our later varieties and will run a week later than Cherokee in maturity. Particularly noted for its resistance against rust. In years when rust is bad it could well double the yields of most other varieties. That's exactly what it did in New York when they had a heavy rust infestation. It doubled the yield of other varieties and even in ordinary years it out-yielded others by 20%. We recommend it for areas having conditions like Central Iowa and North and East. It has a stiff straw and a fine grain quality. The variety was originated in Canada but it is not the same Oat that was originally released under the name of Garry by the Canadian authorities. See Item 178 on price list. This is beautiful quality seed.

Certified CHEROKEE Reselect

The original Cherokee that was sold a few years ago had quite a little variation in its character, but by reselection this line has been greatly improved. The grain has a pinkish ivory color heavy test weight and has one of the nicest grains that you will ever find in such an early oat. The heavy test weight of this grain makes it really outstanding. We now that you will be delighted with its performance as you will be with its heavy test weight, moderate tolerance to stem rust and somewhat susceptible to race 7 and severe black stem blight. Beautiful blue seal processed quality.

See item 170 and 171 for prices on Certified and non-Certified stock.

NEMANA RESELECT

Like the Cherokee this variety has been refined by reselection and it now ranks as one of the leading early oat varieties. It is very similar to the Cherokee, as it is quite an early maturing variety. Meaty, thin hulled. In northern areas will do about as well as the later ones and farther south they are one of the very top selections to make. Resistant to the common races of leaf rust except 45 and 57 and it has tolerance to them. Medium stiff straw.

See item No. 169 on the price list.

All of our seed oats have a special Formula Gro-Coat protection.

OTHER SPRING SEED GRAINS

LEE SPRING WHEAT

Lee is one of the older varieties of spring wheat that has stood the test of time from an all around performance standpoint. It is a high yielding variety of excellent milling quality. It is classed as a hard red Spring Wheat of medium early maturity bearded. Iowa State College reports Lee as the most resistant of the spring varieties to leaf rust and states that it stands up well. Our seed is all new crop northern grown of excellent quality treated and if interested in an extra large quantity write for special delivered prices. Item 198.

HENRY SPRING WHEAT

Henry is a fair milling wheat but is most outstanding as a feeding wheat. It is a top yielder and has high feeding quality. It is a bearded grain medium late maturity, has tall medium stiff straw and is moderately resistant to stem rust, leaf rust, smut and black chaff. Our seed is new crop northern grown of finest quality and guaranteed satisfactory. Item 199.

BALBO (Type) RYE

Spring rye used to be a big seller for early pasture, but the supply is always limited. We find you have very good results by sowing winter rye in the early spring for pasture purposes. The advantage of Rye is that it can be sown earlier than other emergency pasture types like Sudan. It is a very heavy producer and of good feeding value. It can be sown as early as you can get the seed bed prepared and you can use 1½ to 2 bushel to the acre. See item 200 on the price list for various quantity quotations.

PAGE SIX

NEW Gro-Coated SEED OATS

Increased Yields Guaranteed

All of our Gro-Coated Brand Seed Oats are now guaranteed to outyield any other oats of the same variety.

GUARANTEE

"We Guarantee our Berry Gro-Coated Brand Seed Oats to produce more bushels per acre than any other seed of the same variety, from any other source, planted the same date, at the same rate of seeding by the same method, on the same type of soil under the same conditions. If it does not we will refund you the difference in price between what you paid for our Gro-Coated Brand Seed Oats and the other Oats. All claims to be made within 30 days after harvest."

How can we be more fair. Nowhere else can you buy seed on such a basis. You can't lose.

Not only will you find that the seed is of heavier weight, but it will be of much higher purity and stronger germination. There are a lot of the run oats about of good test weight, but are showing poor germination and heavy weeds 1-1½%. That would make these expensive even at a 5% discount. To make sure that you plant the seed that will give you the biggest profit come harvest time.

ASK FOR TRUCK LOAD PRICES DELIVERED ANYWHERE

Golden Beauty Brand Clarion

Clarion is one of the newest in varieties of oats that has come along. It was first introduced in 1946 and has been very carefully tested. It has a wide area of adaptability and certainly has been highly popular. It has given wonderful performance all the way from Nebraska to New York.

In our Golden Beauty Brand Clarion we have what you might call a super blue seal processed oat and we warrant our Berry Golden Beauty Brand of Clarion to outyield any other Clarion including any Certified seed that you may sow. If it does not so we will refund you the difference between what you pay for this brand and the ordinary Certified Clarion. We used to carry this Golden Beauty Brand in the Clinton, but the Clarion seemed so much superior that we are now using this brand on this wonderful new variety.

See item 174 on price list.

CLINTLAND

Clintland seed oats are in very big demand. Certified in particular, in the states of Illinois and Indiana due to the poor quality of grain production last year. We are fortunate in having these non-certified Clintlands available which in quality are equal to Certified. Clintland has good strength of straw, good grain quality and it is an excellent yielder. It is a great improvement over the old Clinton type in that it is resistant to all North American races of crown rust, also common races of smut and races 1, 2, 5, 8 and 10 of stem rust. It is susceptible to race No. 7 stem rust. We are sure in the Corn Belt where the Clinton Oat maturity is what you have used that you will be more than pleased with the Clintland which is a great improvement over Clinton. Item 167.

CERTIFIED BONHAM

We have only a limited quantity of this variety as it was not offered in our general catalog. This is the D69 by Bond Cross which selection was made in Michigan. The variety runs early to mid-season maturity, average height around 36 inches, test weight good. It has a stiff straw and the grain runs from a yellow to pinkish ivory color. It is resistant to most races of stem rust and leaf rust and smut. It will run a little earlier in maturity than the Clintland, not so early as the Ransom, being similar to Cherokee and Nemaha. Item 175.

The New Newton Oat

We've had a tremendous demand for this variety this year. The farmers are wanting to get started with this variety, with the anticipation of selling their first crop for seed purposes. It has exceptionally strong, medium tall straw and appears to have exceptional ability to stand hot seasons. In 1953 it out-yielded other leading varieties by 20 bushel per acre. It is resistant to race 7 stem rust and moderately resistant to crown rust and is also resistant to smut diseases and blight. It has a high test weight and heavy percentage of seed. Mid-season maturity and will give you best results on land of good fertility. If you have rich land, by all means grow Newton. It's an outstanding variety and the seed quality is excellent. See item 177 on price list.

We consider Kindred an outstanding Barley adapted over the widest possible area and also suitable both for feeding and malting purposes. Kindred or L Barley in nearly all tests shows up with a good heavy test weight and a fine yield record. It is early in maturing, too, and in Iowa tests is earlier than Wisconsin 38, Moore or Montcalm. It is the outstanding malting variety in many states or areas. Classified as mid-season in maturity, has rough awns, very good resistance to stem rust, good straw strength. This variety of Barley will combine well with the variety of Cherokee or Nemaha oats where sown together for feeding purposes and some farmers will even add spring wheat. Barleys sown alone should be at the rate of 2 bushels per acre. Where used as a nurse crop would suggest reducing that to at least a bushel to 1½ bushel. See item 191 price list.

SPELTZ

Speltz is a grain crop known for its drought resisting qualities and is also highly nutritious as a ground feed. It has a very wide area of adaptability and is resistant to most races of rust and practically immune to smut. The grain itself is a little softer than wheat and two kernels are enclosed in a husk. Speltz has extremely strong straw so that it makes a fine nurse crop. If seeding alone we recommend 2½ bushel per acre sown as early as possible in the spring. It is very early maturing and can be threshed out like oats. If you are looking for a good feed grain we would recommend that you try some of this Speltz, particularly if for some reason you do not want Barley or Wheat. See item No. 202 on the price list.

BERRY'S GRO-COATED HYBRIDS

BRAND

Plant them next to your top hybrid.

You have unquestionably planted a number of hybrids and have selected that which seemed to be the best to you. We have supplied many farmers who thought they had the very best until they planted Berry's Gro-Coated Hybrids. We urge you for your own interest to get at least a small quantity of the maturity hybrid that fits your requirements best and plant it side by side under similar conditions. We are sure that next year your orders will be largely for Berry's Gro-Coated corn.

405 90 to 100 Stiff stalk, good lodging resistance, medium long shank, deep kernels, stalks quite leafy, often used for ensilage, splendid as a main crop in northern Iowa or for an early planting farther south. It's adapted to a wide area and it is a dandy.
\$12.30 a bushel Flat \$9.30 Round

425 90 to 95 Maturity between 401 and 405. Extra stiff stalk, remarkable standing ability, ears borne a little below medium, nice length ear with deep grain, farm reports show marked tolerance to corn borer. An excellent corn on land of high fertility. It has outyielded many late maturing kinds.
\$12.30 a bushel Flat \$9.30 Round

618 105 to 112 We have only a comparatively few bushels left of this new corn which promises to be one of the best we have yet developed. Splendid for North Central and Central Illinois and throughout Central Iowa and Indiana, Ohio having similar climatic conditions. Medium height, excellent stalk, plant it for hand or machine picking. You just simply have to see it to appreciate it. See page 21 of our catalog for further description.
\$11.90 a bushel Flat \$8.90 Round

615B 107 to 110 This is medium early. It performs along with the best of the later kinds. Ears are fully covered with husks, grow at medium height on strong stalks. Kernels have a reddish tinge on the side, ears hang on well. We have seen this corn perform under varied conditions and it has always been a winner. We believe you will be highly pleased.
\$11.90 a bushel Flat \$8.90 Round

See Page 21 of Our General Catalog for Further Information and Other Varieties.

Importance of Gro-Coat Protection

No matter how fine the pedigree of your Corn, it's very important to get it off to a quick healthy start. Seed with Gro-Coat protection is guarded against the seed roting organisms that are often so damaging when cold wet weather follows planting. Gro-Coated Brand seeds are protected against such organisms. That is why they produce sturdier stands which in turn make greater crops and more profits for you. Note especially the effect it has on early root development.

813 115 to 120 Similar to 800 but contains an additional line which tends to prolong the pollinating period thus giving assurance of better filled ears when high temperatures prevail at tasseling time. It takes a lot of hot weather. Adapted to heavy planting rates if desired and it has been our biggest seller in the 800 series.
\$11.40 a bushel Flat \$8.40 Round

825A 112 to 118 This is a little earlier than the other 800's and our newest development in the 800 series. The performance records indicate that it will probably replace both of the other 800 line. Medium, long, well-covered ears, withstands borer infestation well and many refinements have been worked into this number. If you can use this maturity range be sure to include some 825A.
\$11.40 a bushel Flat \$8.40 Round

BERRY'S FAMOUS BLENDS

We do not have space here to give you full information on these blends. Please refer to page 21 of our general catalog. In our blends we use different varieties that have similar maturity and yet not too close together as to prolong the pollinating period and the results in many cases have been sensational. This comes in two maturity ranges as indicated below. The Regular flat is a grade of corn such as is regularly planted but may have a few ears of a slightly earlier flat is graded for accurate planting but is shorter kernels. Thick flat, kernels too round to be classified as round and too thick to make regular blends. NOT for numbered varieties.

MEDIUM MATURITY		LATER MATURITY	
Regular Flat.....	\$8.75	Regular Flat.....	\$8.50
Small Flat.....	7.50	Small Flat.....	7.25
Thick Flat.....	6.75	Thick Flat.....	6.50
	6.25	Round.....	6.00

All Gro-Coated Hybrids are Accurately Graded.

PROOF OF DROUGHT RESISTANCE! CROPS FOR HAY and GRAIN

NEW HYBRID COMBINE GRAIN SORGHUMS

GM-333— Our very earliest Hybrid, about 10 days earlier than R. S. 590. It has a loose spreading head which is conducive to fast drying. Seed is brownish tan and is an extra fine yielder for being so early in maturity. See page 23 in catalog. Item No. 243. **\$18.00 cwt., 50 lbs. \$9.25.**

ATLAS SORGO

A highly drought resistant crop that we might term as being a sweet stalk grain sorghum. Produces enormous yields of fodder. In dry seasons it has out produced corn in grain yields 3 to 1. Juice from the sorgo is very sweet. It is palatable and very nutritious feed. Will grow 10 to 12 feet tall. It has good resistance against lodging. Plant 8 to 12 pounds per acre at corn planting time or after, in rows 40 inches apart. Item 220. **\$5.75 per 50 lb. bu.**

NORKAN

This is sometimes referred to as Early Atlas because it resembles it in many ways. Matures about 10 days to 2 weeks earlier. Can be grown farther north. In areas south of central Iowa or similar directions Atlas would produce more tonnage. For shorter seasons Norkan would be a better selection. While stalk growth is not as tall the grain yield generally equals it. This is a cross of Atlas Sorgo and early Sumac Cane. Item. 221. **\$5.75 per 50 lb. bu.**

NORGHUM

This is the earliest of the combine grain sorghums we offer. It has an open type seed head that sticks high up above the leaves. Head dries out well, ideal for combining, sturdy stalks, resistant to lodging. An excellent record of grain production and is demonstrated to be of splendid feeding value. Drill eight pounds per acre a little after corn planting time, 36 to 40 inch rows. Item 219. **\$4.25 per 50 lb. bu.**

NEGARI

A heavy yielding grain sorghum. Stalks are very sturdy, of medium height. About six feet tall under southern Iowa conditions. The top is very nutritious when used as fodder. Cattle like it, can be used also for ensilage or grain. Has yielded 5,000 pounds of grain per acre and up to 8 tons of ensilage. Item 217. **\$7.75 per 50 lb. bu.**

R.S.—590— Formerly listed as G M 444. In maturity this is about the same as Redbine 60 Milo. It has a good head growth and is excellent for combining. Yields have averaged 25 to 40% over open pollinated Redbine 60 in some cases. Grain color is very light red. Item No. 240. **\$18.00 cwt., 50 lbs. \$9.25.**

R.S.—620— Formerly listed as G M 666. This is medium maturing and similar to Martin Milo. Light colored grain. The feeding value of this new grain sorghum is comparable to corn. A heavy producer, does well in dry seasons. Its yield is approximately the same as corn on land that will produce 50 to 85 bushel corn. On land that produces better than 85 bushel the sorghums yield is somewhat less. The grain sorghum is not susceptible to attack by corn borers, grasshoppers or harmful soil insects such as root worms. It is red seeded, blooms in 60 days, and matures early. The kernels are large. It will average 3 to 3½ feet in height. Item 222. **\$4.25 per 50 lb. bu.**

REDBINE 60

This is a new variety of Grain Sorghum. It's a short season, drought resistant grain crop. The feeding value of this new grain sorghum is comparable to corn. A heavy producer, does well in dry seasons. Its yield is approximately the same as corn on land that will produce 50 to 85 bushel corn. On land that produces better than 85 bushel the sorghums yield is somewhat less. The grain sorghum is not susceptible to attack by corn borers, grasshoppers or harmful soil insects such as root worms. It is red seeded, blooms in 60 days, and matures early. The kernels are large. It will average 3 to 3½ feet in height. Item 222. **\$4.25 per 50 lb. bu.**

GOLDEN MILLET

Do not sow until corn planting time or after. Requires a very warm seed bed. Makes a hay crop in 50 to 65 days. Produces growth up to 4 and 5 feet depending on soil fertility and moisture conditions. Feeding value of hay similar to other grasses. Makes best hay if cut when in full bloom. Sow 35 to 50 lbs. per acre for hay. Item 225. **\$3.00 per 50 lb. bu.**

Proso or Hog Millet

This is also sometimes called Brown Corn Millet. It is used almost exclusively for seed. It is a very prolific producer and the seeds are larger than other millets. Makes good chicken feed. About equal to Barley in feeding value. Yields up to 80 to 70 bushel per acre are reported. It matures early, producing a seed crop in 60 to 70 days. Sow 40 to 50 lbs. per acre. Item. 227. **\$3.25 per 50 lb. bu.**

JAP MILLET

Many times referred to as Billion Dollar Grass. It is a tall, fast growing, very heavy yielding variety of Millet. Prefers fertile moist soil and cool growing conditions. Makes a hay crop in six to eight weeks after seeding. Yields up to 50,000 pounds of grain feed per acre. Plant from 15 to 20 pounds per acre. Gro-Coated Brand Processed. Item 232. **\$13.00 per cwt., \$6.70 per 50 lb. bu.**

Greenleaf Sudan

A new variety that has excellent vigor and greater leaf disease resistance. It has a higher percentage of leaves than most varieties. They are darker green in color, yet have a low hydrocyanic content which means less danger of prussic acid poisoning, matures later than most. Under drought or other unfavorable conditions, Piper may grow taller but much of that is stems. The high percentage of leaves, higher protein content and disease resistance makes it a superior variety for this area. See Item 228. **\$14.00 per cwt. \$7.20 per 50 lbs.**

Sweet Sudan

This variety ranks very high in popular favor. It was produced by crossing regular Sudan with Leota which is a sweet juicy sorghum. This grows very much like ordinary Sudan, it stools even more freely, and grows taller. The leaves are a little broader. It is a sensational yielder. We have reports that it has outyielded regular or common Sudan by 30%. See Item 231. **\$11.50 per cwt., \$5.95 per 50 lbs.**

Piper Sudan

This variety was developed in Wisconsin. There are many farmers who rate this as the best variety to grow. It is not as sweet as the Sweet Sudan in flavor but still is a very palatable crop. Piper Sudan resists foliage diseases better than common Sudan and stays green longer. It is also claimed to be lower in prussic acid than other Sudan. It seems to be definitely adapted to cooler climates. That alone is a very important feature for our customers in northern areas. Excellent results have been obtained from this variety in states like Wisconsin, Minnesota, Iowa, Nebraska, New York, Pennsylvania, and other corn belt states. The young plants have a very strong seeding vigor, and it is important to get young plants off to a quick start. The crop makes a good recovery after grazing and it is very satisfactory to livestock as a feed. Makes best hay if cut when in bloom. See Item No. 229. **\$14.00 cwt., \$7.20 per 50 lbs.**

Everything to Gain—Nothing to Lose

- Protects seed against rotting in the soil.

- More of the seeds sown make plants.
- The plants are healthier.
- The plants grow more vigorously.
- Produces larger yields.
- Makes for bigger profits.
- Gives greater assurance of stands.
- Requires less seed per acre.
- Costs less money per acre.

RETAIL STORES

LOCATIONS

As explained on page 3 of our General Catalog, we have 10 Retail Stores at the following locations: **OHIO**—Stokes Manor, 420 North Main St.; Van Wert, West of Highway No. 20; **DUTCHES**—Stratford 964 East Kentucky Highway No. 84; North City Limits; Galesburg, S.W. 1st & Harrison; **KANSAS**—Highway 160 and 7th; **MISSOURI**—North Vineville, 601 N. 1st; **INDIANA**—Bloomington, Boone, State on Highway No. 50, near the Indiana, Ill. and Ohio border; **NEBRASKA**—5030, 2907 East Meridian; **GARFIELD**—All INDIANA, 5030, 2907 East Meridian; **VERMONT**; and **NEBRASKA**: 1944 Seed Company, Falls City. Many farmers drive 100 miles or more to buy their seed at these stores because they are all managed by experience and they can give you much help and valuable information.

STORE STOCKS AND PRICES

Our scores handle all of the main line items listed in our catalog and price list. They do not have all of the special lots available to mail order buyers. Store prices are the same as our fresh-able to mail order prices. There is no freight allowance because there aren't any. We ship by express, so you get your goods fast. However, such items as heavy hardware, professional services, etc., cannot be shipped by mail. These items will be charged extra. Some small stains, oils and soapscum, stain prices will be much lower than mail order. You have widest selection by mail—See opposite page for Guarantee, Satisfaction Delivery.

This corn may become even self-evident if we compare Hybrid Seed Corn of today to the old open pollinated Seed Corn that was commonly used as recently as 20 years ago. Today there is fine quality open pollinated varieties available of good high germination that you can buy for about half the price of the Hybrid Seed Corn varieties. Why then don't you use 2 1/2 bushels of open pollinated Seed Corn to produce 1 bushel of Seed Corn? It is probably safe to say that the increased yield from Hybrid Seed Corn of 20 bushels per acre will mean \$20.00 more in additional income per acre.

In the case of field seeds, this extra and better yield is not

so easily mown as grasses and legumes are used for other purposes such as forage, pasture, hay and silage. We find for example, Coastal Broomrape, a very hardy plant, which is very difficult to cut with a mower. Brand seeds, this is highly viable to the naked eye. Even a 20% reduction in seed viability is hardly of any consequence. It is a very hardy plant, but greater pasture returns or yield of hay sometimes isn't readily demonstrable. That's why, to encourage you to try Go-Coated Brand seeds more could take to offer. In other words, our Go-Coated Brand seeds like Hybrid Seed Brand will probably cost a little more than regular seeds, but Go-Coated Brand will protect. We guarantee if you don't get a better return than from any other commercial seed, treated or non-treated, we'll pay for our product over the lifetime of the seed.

Gro-Coated Brand seeds, legume and grass, mean just as much to you today as Hybrid Seed Corn. We are sure you are not considering going back to planting open-pollinated and by the same token, you don't want to plant legume and grass seed markedly inferior to our Gro-Coated Brand Process grass and legume seeds in performance. You can't tell the difference between the two. Gro-Coated seeds are as good as you can have under any conditions. A third failure alone can mean a big loss to you, as you know. So protect yourselves as far as possible by using only Genuine Gro-Coated Brand Process Seeds with the tag and seal on the bag.

INOCULATE

ALL LEGUME SEEDS

Don't Fail To Order It

We consider the inoculation of legume seeds of very vital importance to get satisfactory stands. Inoculation will not help the germination of the seed, but it can very materially stimulate the growth and development of plants after they have formed. Gro-Coat does not take the place of inoculation and all Clovers, Alfalfa, Peas, Beans and Vetches should be inoculated.

By us, **Berry's Mound Germ** inoculation there is no need for any special treatment of the seed, just mixing around with water. You apply it dry just before sowing. It's a very simple and effective way to protect your seed from the most common seed-borne diseases, even though you don't suffer the effects in the field but over the winter. It's a very simple and effective way to protect your seed from the most common seed-borne diseases, even though you don't suffer the effects in the field but over the winter. It's a very simple and effective way to protect your seed from the most common seed-borne diseases, even though you don't suffer the effects in the field but over the winter.

Prices on Berry's nodule germ: Combination inoculant for **Alfalfa** and **Red Clover**: **Aliske**, Ladino and **Sweet Bean**, size **60C**: 2½ bu. size **60C**; **Birdfoot Trefoil**, ½ bu. size **35C**; **Vetch**, 100 lb. size **60C**; **Soybeans**, 2 bu. size **45C**; 5 bu. size **65C**; 2½ bu. size **47.5C**; **Field and Garden Peas**, 2 bu. size **45C**.

Feb.-March-April, 1958
Regular Edition

[illegible][illegible]

We will ask you to refer to the catalog for all garden seeds and nursery items, all of which we can still supply at this time.

Money Back If Seed Comes Too Late

Mel Yourder told today if possible Don't put it off so long that you can't get Go-Coated Brand seeds will mean so much to your family as to make it possible for this year. We will let you every day possible on delivery program for this year.

If delaying too long to prepare for us to meet your demands under any circumstances that we make this shipment and you have given us a date as a deadline that you want the seeds on hand and we fail to do so, we will refund you the money back.

We stand the transportation both ways. Remember, Go-Coated Brand seeds you get a quicker start and they can be sown a week or ten days later than regular seed and still have satisfactory results. The better you treat them in the ground the better off you will normally be.

SPECIAL HANDLING SERVICE

If delayful too long to get your order in the mail and shipment or delivery is not in time for your planning needs the best thing to do is call or write us at the nearest point to you and have our shipment routed to you in the shortest time possible. Our office is located at Liberty 2-2101, at Stratton, Illinois 62182, and Macomb, Ohio 42641. This will save a day or two over mailing your order in, and you can make remittance by mail, money order, check or cash.

We show you the rates in which we can ship freight orders—over 300 lbs., or more. For orders in these states of less than 300 lbs., or more. For orders where the freight is not fully paid on 300 lbs. or more, a freight allowance of \$12.5 per hundred lbs. is added to the total cost of the goods shipped. The shipment to come by truck takes place as soon as the order is received. We will deliver it to your door, or if you are some merchant who can take delivery for you from the trucking if there isn't a truck depot in your town.
